ICT286 MAJOR ASSIGNMENT TWO CHECK LIST

Member 2: Lachlan Blackhall - 32667253	
Tutor's Name: Mohammad Alhabashneh	
Assignment Due Date: _7/Nov/2016 12:00PM_ Date Submitted: _7/Nov/2016	
Your assignment should meet the following requirements. Please confirm this (by tie boxes) before submitting your assignment.	cking
✓All details above are complete.	
√The archive file (a zip file) contains the file Assignment2.doc.	
√The archive file contains a sub-directory named "WebApp" which contains all files related to web application.	to the
√The archive file contains a sub-directory named "MobileApp" which contains the files for t mobile application.	he
√The documentation was prepared according to Documentation Requirements specified in M. Assignment 2's question sheet.	ajor
√This archive file will be submitted to ICT286 Unit LMS.	
✓We have kept a copy of this assignment, including this archive file.	
✓Our web application is hosted on the server ceto.murdoch.edu.au. Our web application's urb	lis

Group Declaration

As a group assignment, each member of the group is expected to make an equal contribution to the assignment and receives the same mark for the assignment.

✓We have signed the Group Declaration in the next page.

However, we recognise that on some occasions and due to various reasons, the actual contributions to the assignment from the two members could be unequal despite the best efforts of each member. In this case, we can still accept your assignment provided that all members of the group reach an agreement on their percentages of contribution to the assignment, and the agreement accurately reflects the real contribution by each member. In such a case, a member's mark is linked to his or her agreed contribution to the assignment and is calculated using the following formula:

A member's mark = minimum (group mark x the member's percentage of contribution x 2, group mark + 10, 100)

On some rare occasions, the two members of the group fail to reach an agreement on their contributions to the assignment. In such a case, in order for your assignment to be marked, each member of the group must complete a detailed *Task Breakdown List* and state his or her own claim of the percentage of contribution to the assignment. Your tutor will then award each member a mark based on his assessment of the quality of the assignment as whole as well as his assessment of that member's contribution to the assignment.

Please complete and sign *one* of the three declarations below:

We have made an equal contribution to this assignment. We understand that each of us will receive the same mark for this assignment.		
Signature (member 1): _mpanicciariDate: _06/11/2016

The task description: Your task is to design and implement a web and a mobile application for a fictitious company so that it can conduct its trade over the Internet.

The fictitious company for which your application will be designed must meet all requirements specified in the next section.

You are required to use the following technologies to implement the web and mobile application: HTML5, CSS, JavaScript, PHP, MySQL, and Apache Cordova. You should use Ajax technology to speed up the application and to reduce unnecessary page loading, eg, searching, user authentication, and database update. You must not use any web content management framework/system to create this application unless you have obtained a written approval from the Unit Coordinator.

Discussion of your solution: For our solution we chose to make our whole site a one page application just for ease of use and to cut down on loads times. The navigation is always going to be consistent because we use the one page and have a section inside the body loaded to different HTML using Ajax. The result of our solution does meet our expectations and has come out a lot better than we first expected the simple look of the site allows for users to navigate and find what they want easily.

We believe a strong point of our solution is that it is very easy to add new features as it is very modular our scripts are separated and we are using Ajax to load html into our page without having it refreshed. Almost everything has its own element and container which allows for changing of elements with ease without needing to change a lot.

An improvement that could be made to our solution would be how the layout is we found it difficult to have the login area fit in nicely with the surrounding elements, once you have logged in the way the buttons are aligned does not look as good as it could in our opinion.

Self-diagnosis and evaluation:

Features fully working:

Our solution contains the basic information about the company as created in the fictitious company description, it is accessible via a button on the nav bar this button is named about us and contains all necessary information.

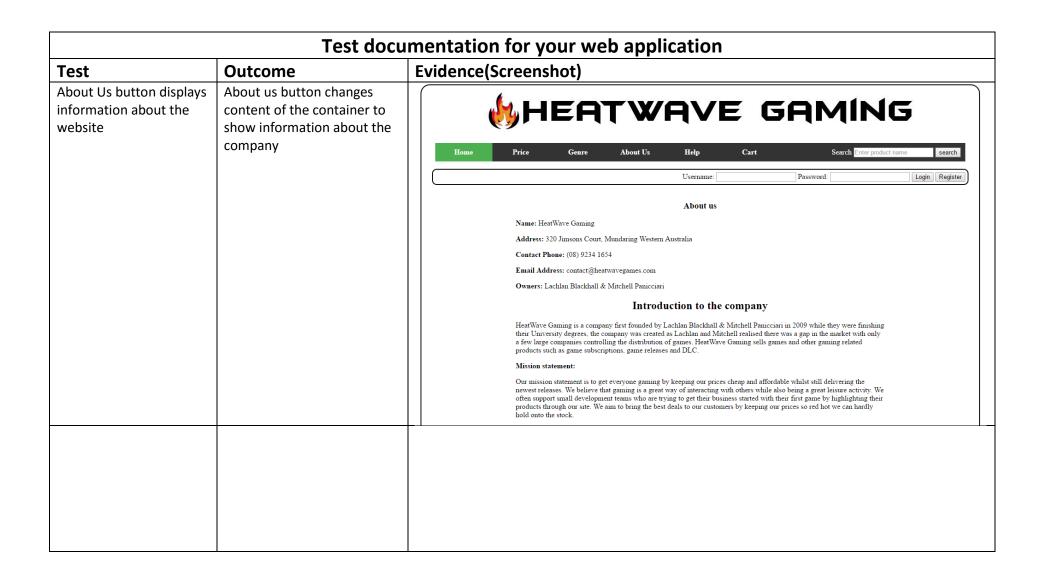

Our navigation system is consistent throughout the whole solution because we only have one page and use Ajax to load in different html elements as the user uses the website.

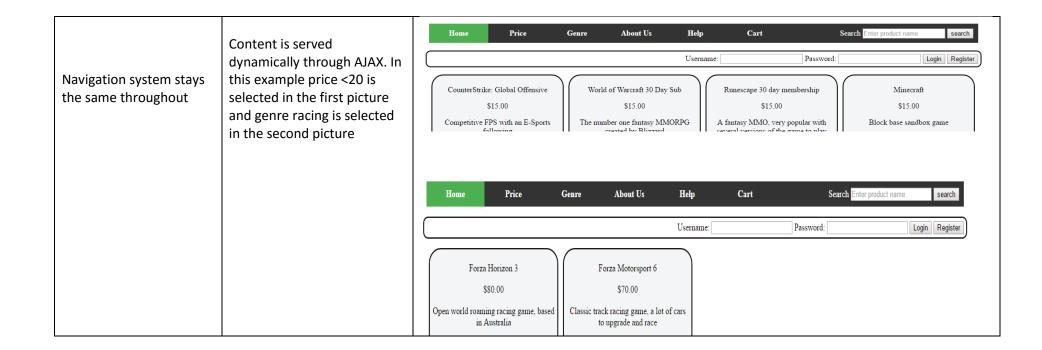

Our website provides the user with a help button which will open a new tab with a PDF document explaining how to use our website.

Our website offers a sitemap which shows the structure of our site.

Our site implements some of the html5 semantic elements such as header, footer, nav and section to define the overall structure of our web page. We have also used CSS externally to define our styles and visual layout of the solution.

Our website has been primarily tested on the latest version of Google Chrome but it also has full functionality on both the latest versions of Mozilla Firefox and Internet Explorer. Our web page is served through CETO and is therefore using ApacheHTTP and PHP is enabled.

Help button shows page for how to use the site

Help button opens a PDF document in a separate window with information about how our site works

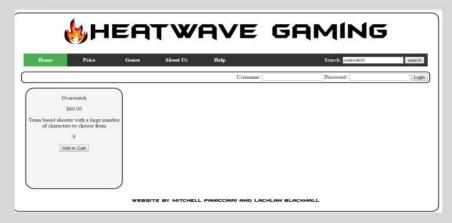

How to use HeatWave Gaming webstore

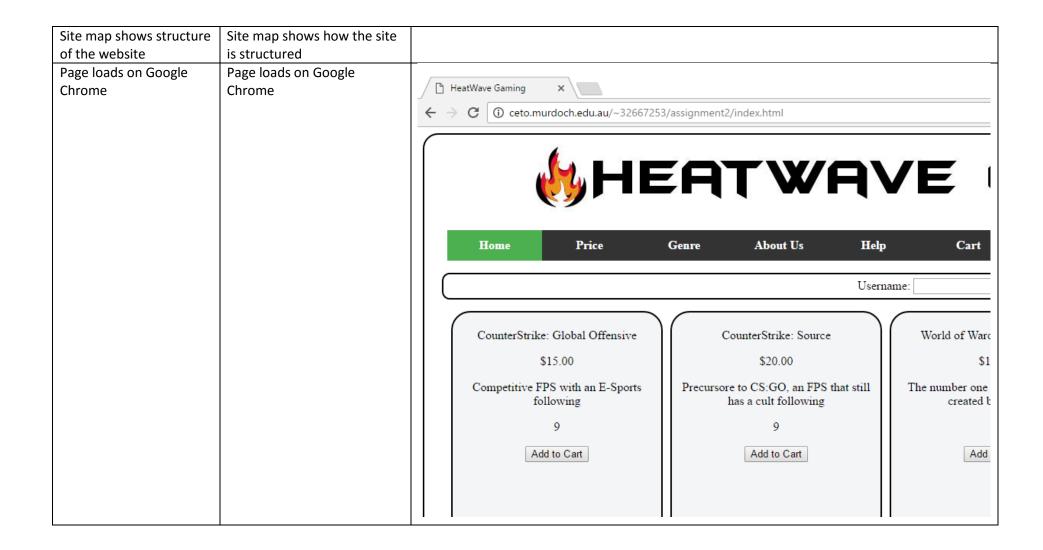

Searching for products

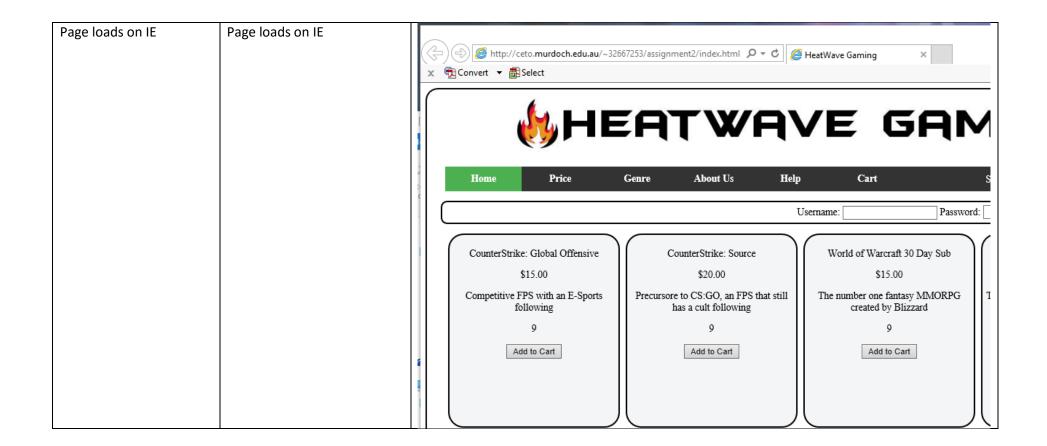

There is two main ways of searching for products on our website, the first way is via the search bar located on the main navigation bar at the top right of the screen.

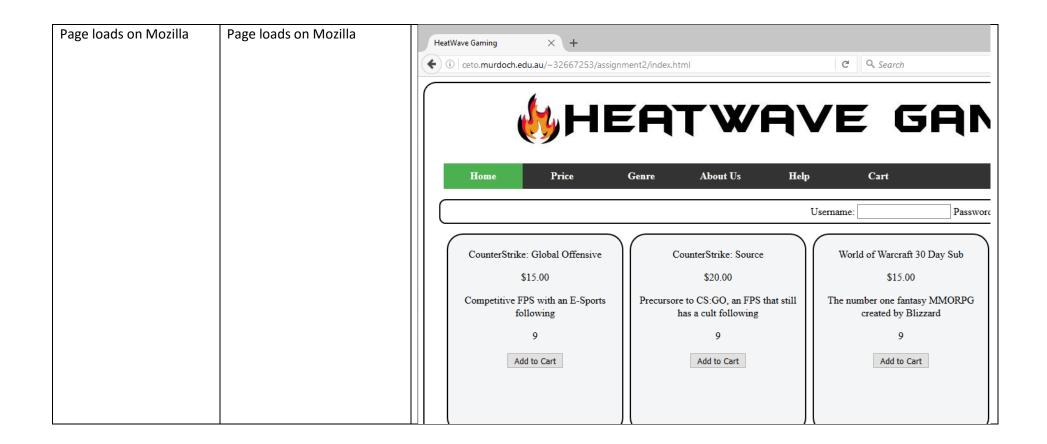

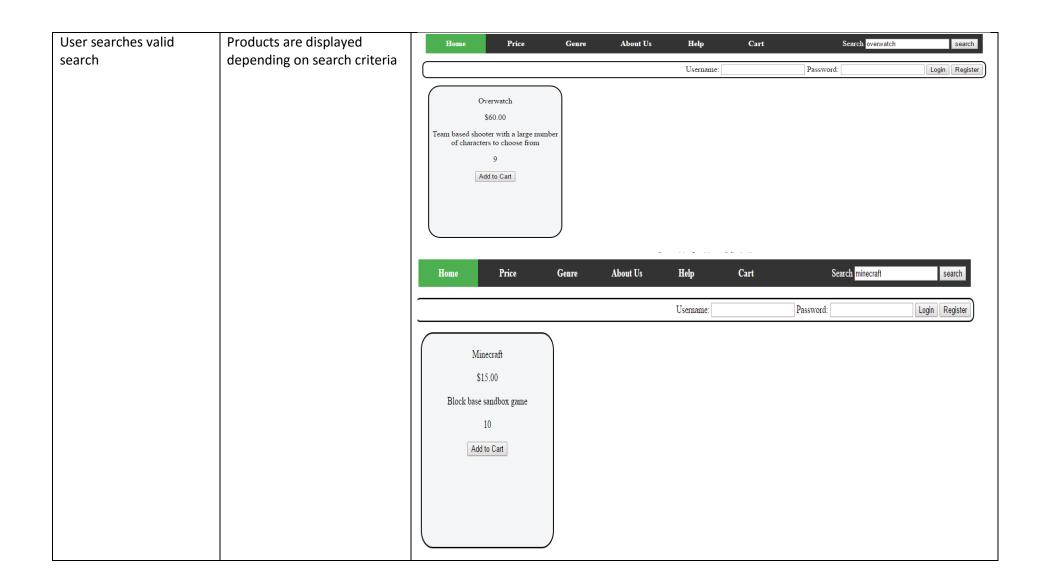

In the search bar you can search for anything related to the product you are after, the search will return products which are related to what you searched. For example typing in "Overwatch" will search all the products and find any that match the description or name of "Overwatch". You do not need to complete the word you can also use tags which may be associated with the product such as "Ow".

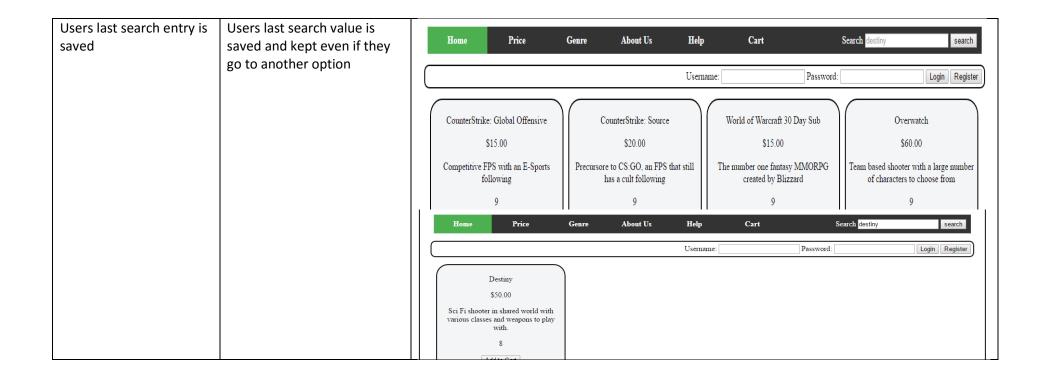

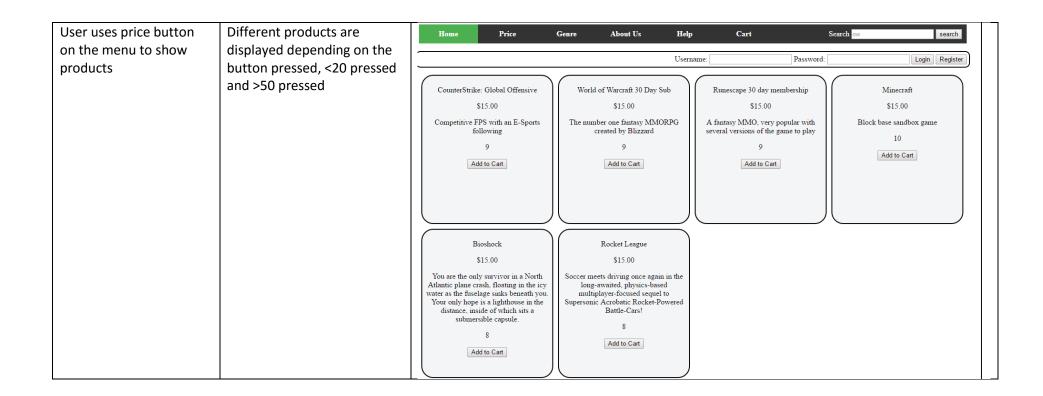

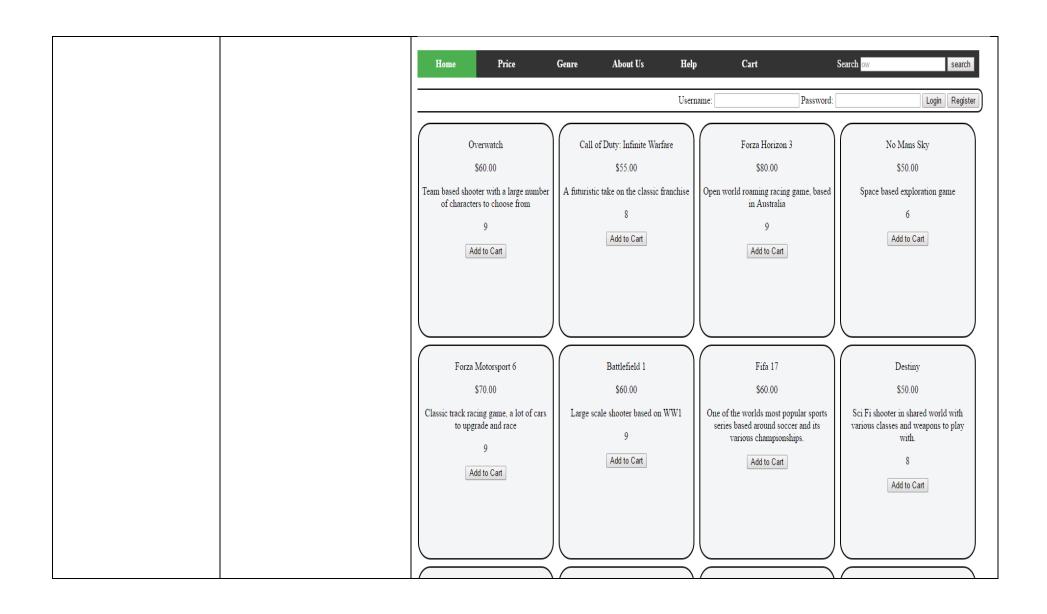

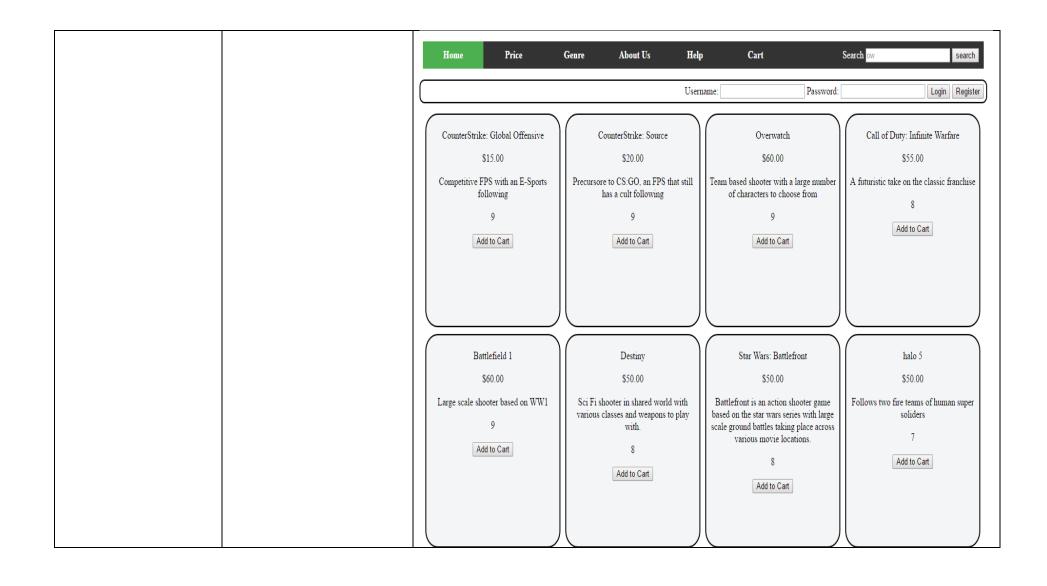

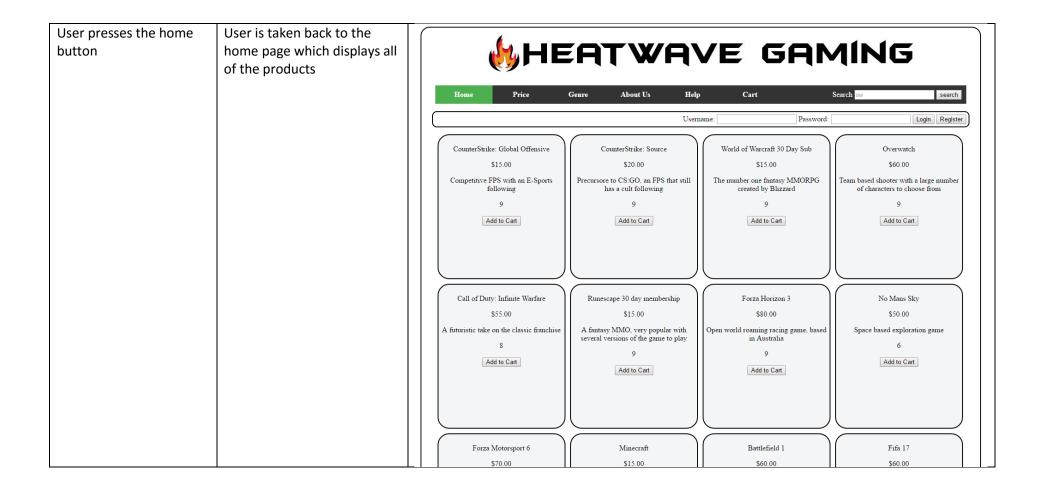

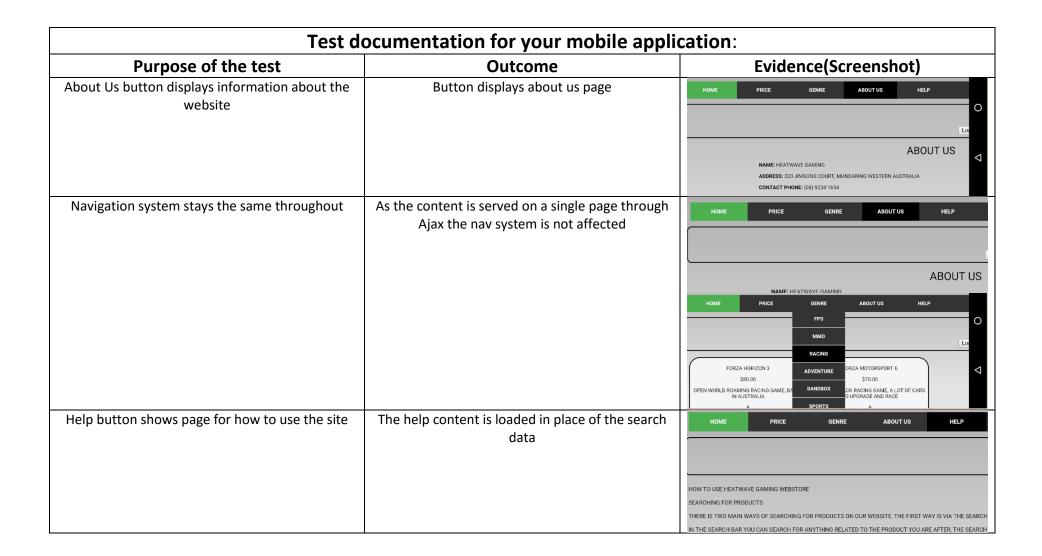

User enters correct login information	User is able to login to the website and access other features	Username: staff1 Password: Login Register
		Welcome Staff Log out Edit user details Add Products Add new staff account
		Username: user1 Password: Login Register
		Welcome User Log out Edit user details
User enters incorrect login information	User is unable to login to the website and is alerted that they have entered it	Username: wrong Password: Login Register The entered username or password is incorrect
User presses log out button	incorrectly User is logged out and the login screen is shown	Username: Password: Login Register

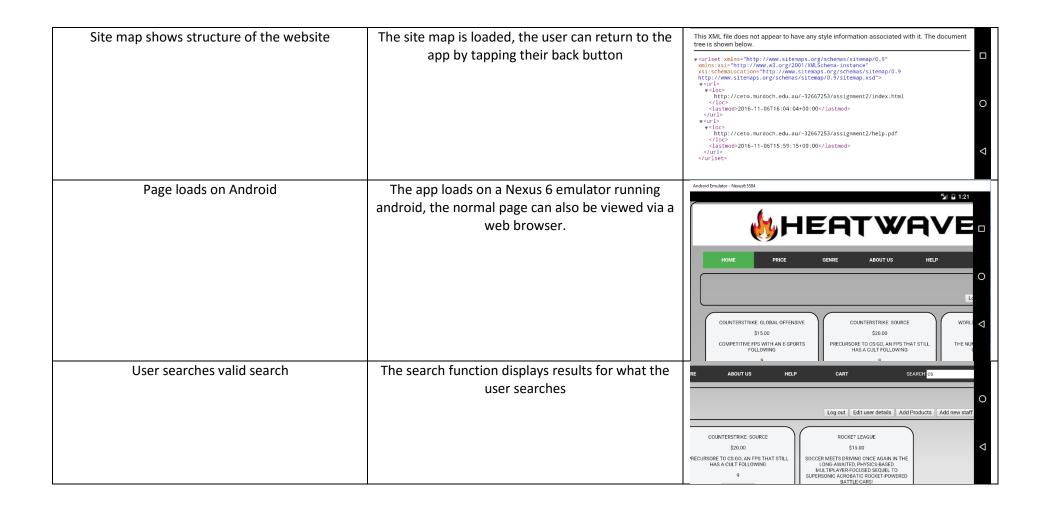

User presses edit user	USer is displayed with a form
